IPL Laser Hair Removal

The ECOLITE IPL hair removal system (Intense Pulse Light) produces a high intensity flash of filtered light from the applicator head, which is placed in contact with the skin. The hair acts as a conductor of the light and effectively turns it into heat. The heating denatures, or kills, the cells making them incapable or producing further hair growth.

Get One Small Area FREE With 5+1 FREE Session of IPL Laser Large Area IPL Treatments for Your Skin

Photo-Rejuvenation - Many factors contribute to the ageing of our skin, including excessive sun exposure & decreased production of collagen. Over time, due to cumulative sun exposure alterations in the colour & texture of the skin inevitably occur. In addition, the collagen in the skin that keeps it taut begins to weaken, & with the pull of gravity the skin becomes lax. The result is wrinkled, sagging, uneven, & blotched skin. Thanks to the miracle of IPL technology, photo-rejuvenation treatments can literally turn back the clock, restoring a more youthful & vibrant appearance to the skin. **Designed to reduce age spots, fine lines, visible blood vessels, uneven pigmentation or diffuse redness.**

PAY FOR 4 & GET THE 5th FREE from £75

Blemishes and Acne - ECOLITE IPL technology is also an innovative way to quickly, safely & comfortably improve Blemishes & acne, treat sun-damaged skin, remove age spots from your face, chest, arms, hands & eliminate unwanted thread & spider veins. Amazing results can be seen in as few as 3-4 sessions.

from £50

Thread & Spider Veins - Thread & Spider Veins, which affect the face, body and legs, are extremely common and can be very embarrassing. However IPL technology can now be used to effectively remove them. The ECOLITE IPL emits a powerful yellow light that is absorbed by the red colour in the veins. Vein treatments are performed quickly, within 15 to 20 minutes, yielding complete results after around 4 or 5 sessions. from £ 50

Rosacea - is a chronic skin condition that causes redness & swelling, to the face, scalp, neck, ears, chest & back. Today, IPL is considered to be the best treatment for this condition. Not only do most Rosacea sufferers see great improvements in symptoms, but also a reduction in the rate of future flare ups. Furthermore, the warming effect of the light energy from the IPL device also increases the production of collagen that has a tightening & smoothing effect on the skin. Clients with mild to severe Rosacea can see an 80 to 90% overall reduction in facial redness in 4-6 treatments from £75.00

Sun Damaged Skin and Pigmentation

IPL uses wavelengths of heated light which are directly aimed at the pigmented spots, the pigment is able to be targeted precisely without damaging the surrounding tissue. After the session, the skin pigmentation or sun spots will gradually fade & slowly disappear. IPL treatments effectively reduce skin pigmentation in approximately 4-6 visits. Most clients report 70% or greater improvement over the duration of their treatment course. from £75
